

# Wednesday Webinar

Diving into Data Gateway  
November 2, 2016

- Teri Southam

# Privacy Technical Assistance Center (PTAC)

## Data Security and Privacy Training

Directed at LEA Assessment and Technology Directors

Livestream; will NOT be recorded

Date: December 1, 2016, 9:00-12:00      Location: TBD

9:00 – 9:15	Opening Announcement, Introductions
9:15 – 10:00	FERPA 101
10:00 – 10:45	Security Best Practices for Districts & FERPA Reasonable Methods
10:45 – 11:30	Protecting Student Privacy while Using Online Resources and District Transparency
11:30 – 12:00	Quick Disclosure Avoidance Overview

# UTREx Update

- Data collectors came back online on Friday, October 28<sup>th</sup>. Yay!
- Coordinate with your UTREx Specialist to begin sending uploads so that SAGE, Utah Compose and UTIPS can become current.

## Register in On Track for Training Course # 64878

## Comparison of a School to Similar Schools

### How are similar schools identified?

#### How Similar Schools are Identified

Schools similar to a chosen target school are identified by using a mathematical and policy approach based on Gower's "general coefficient of similarity," a relatively simple measure of how close two objects are in a multidimensional space. Its simplicity facilitates transparency. Evidence from pilot testing based on the knowledge of several local education agency officials suggests it does a better job of identifying similar schools than our previous (PVA) algorithm. For more about Gower's similarity, see the [original paper](#).

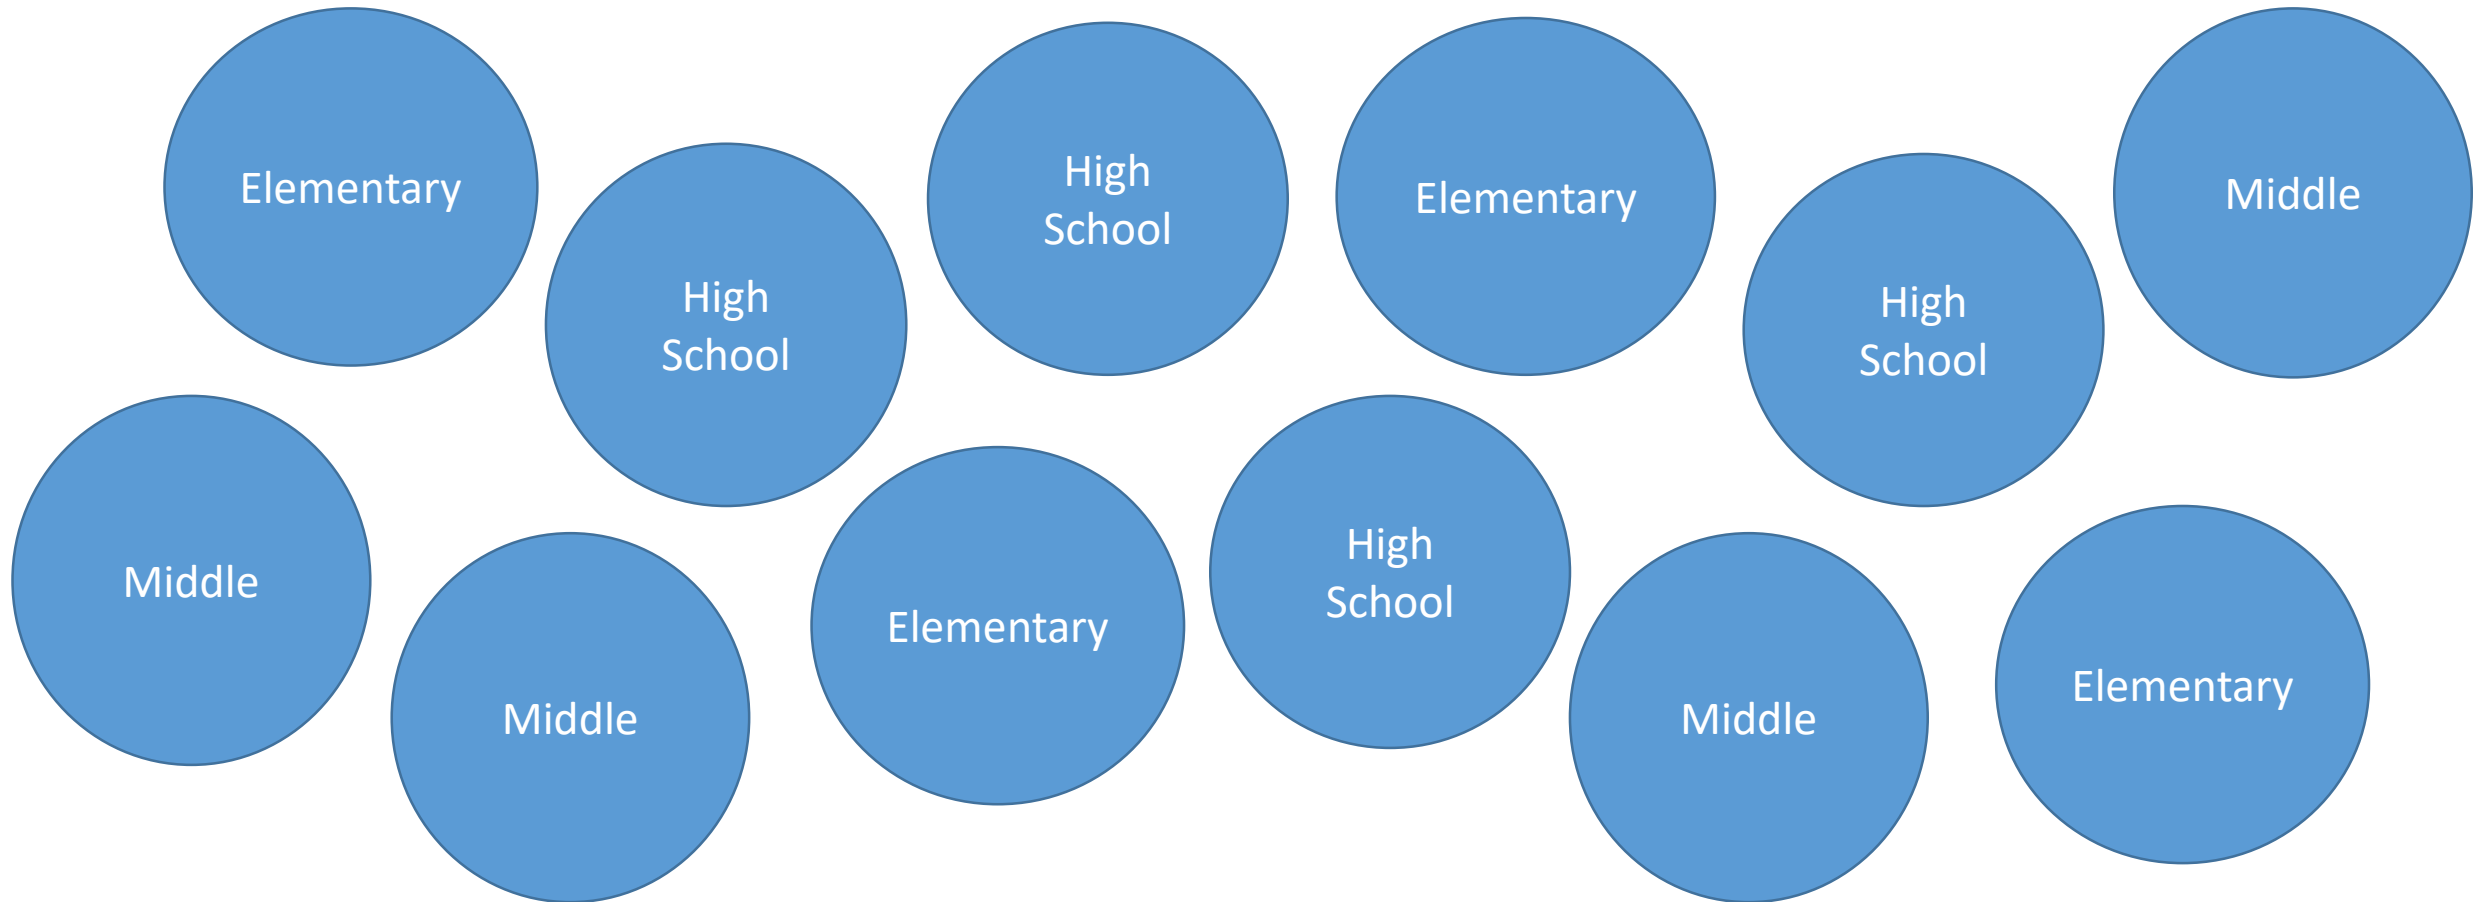

**Variables [Weights].** Our implementation of the algorithm takes into account four school contextual variables — overlap in grades served (as opposed to conventional school types like elementary middle and high school) [1.0], sector (district or charter) [0.25], locale (city, suburb, town, or rural, plus distinctions among large, midsize, and small for cities and suburbs, and among fringe, distant, and remote for towns and rural places, all as assigned by the U.S. Bureau of the Census) [0.375], and Necessarily Existent Small School status [0.125] — and seven student demographic composition variables — low income [2.25], racial minority [2.0], enrollment size [1.5], limited English proficiency [1.25], special education [1.0], mobility [0.75], and gender [0.5]. As the bracketed values indicate, the variables are weighted differently. For example, low income is almost five times more influential in the comparison than gender. These weights are based on empirically-informed policy decisions rather than, as in PVA, on the results of statistical analysis alone.

**More To Come.** In subsequent years, we hope to exploit the flexibility in Gower's similarity by allowing users to select variables and assign weights according to local policy priorities or, in other words, to construct their own comparison models.

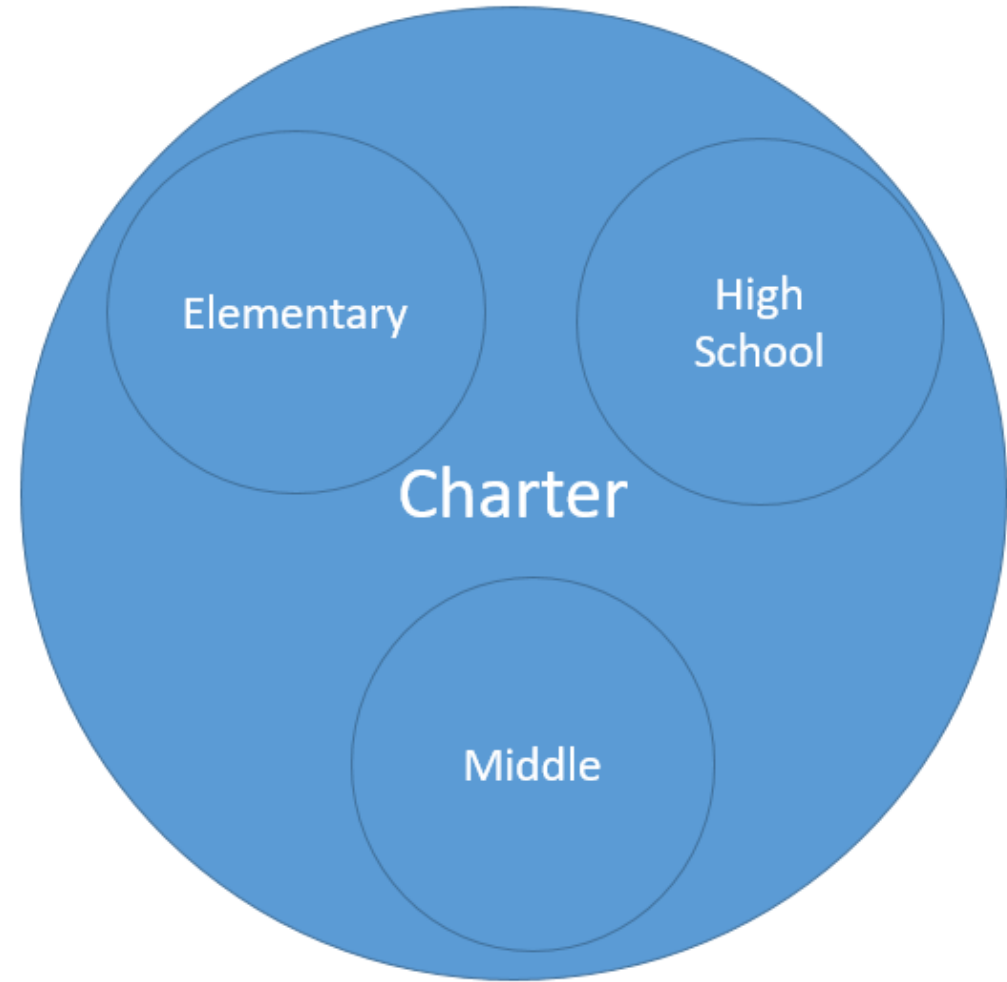

**Limitations.** Schools which are online or otherwise "virtual" are excluded because they do not fit the geographic assumptions of the model. Schools designed for special purposes — special education, alternative education, and vocational education — and so identified in our data warehouse are also excluded. The first two types of school have a separate accountability system and the third is not included in accountability.

# Gower's “general coefficient of similarity”

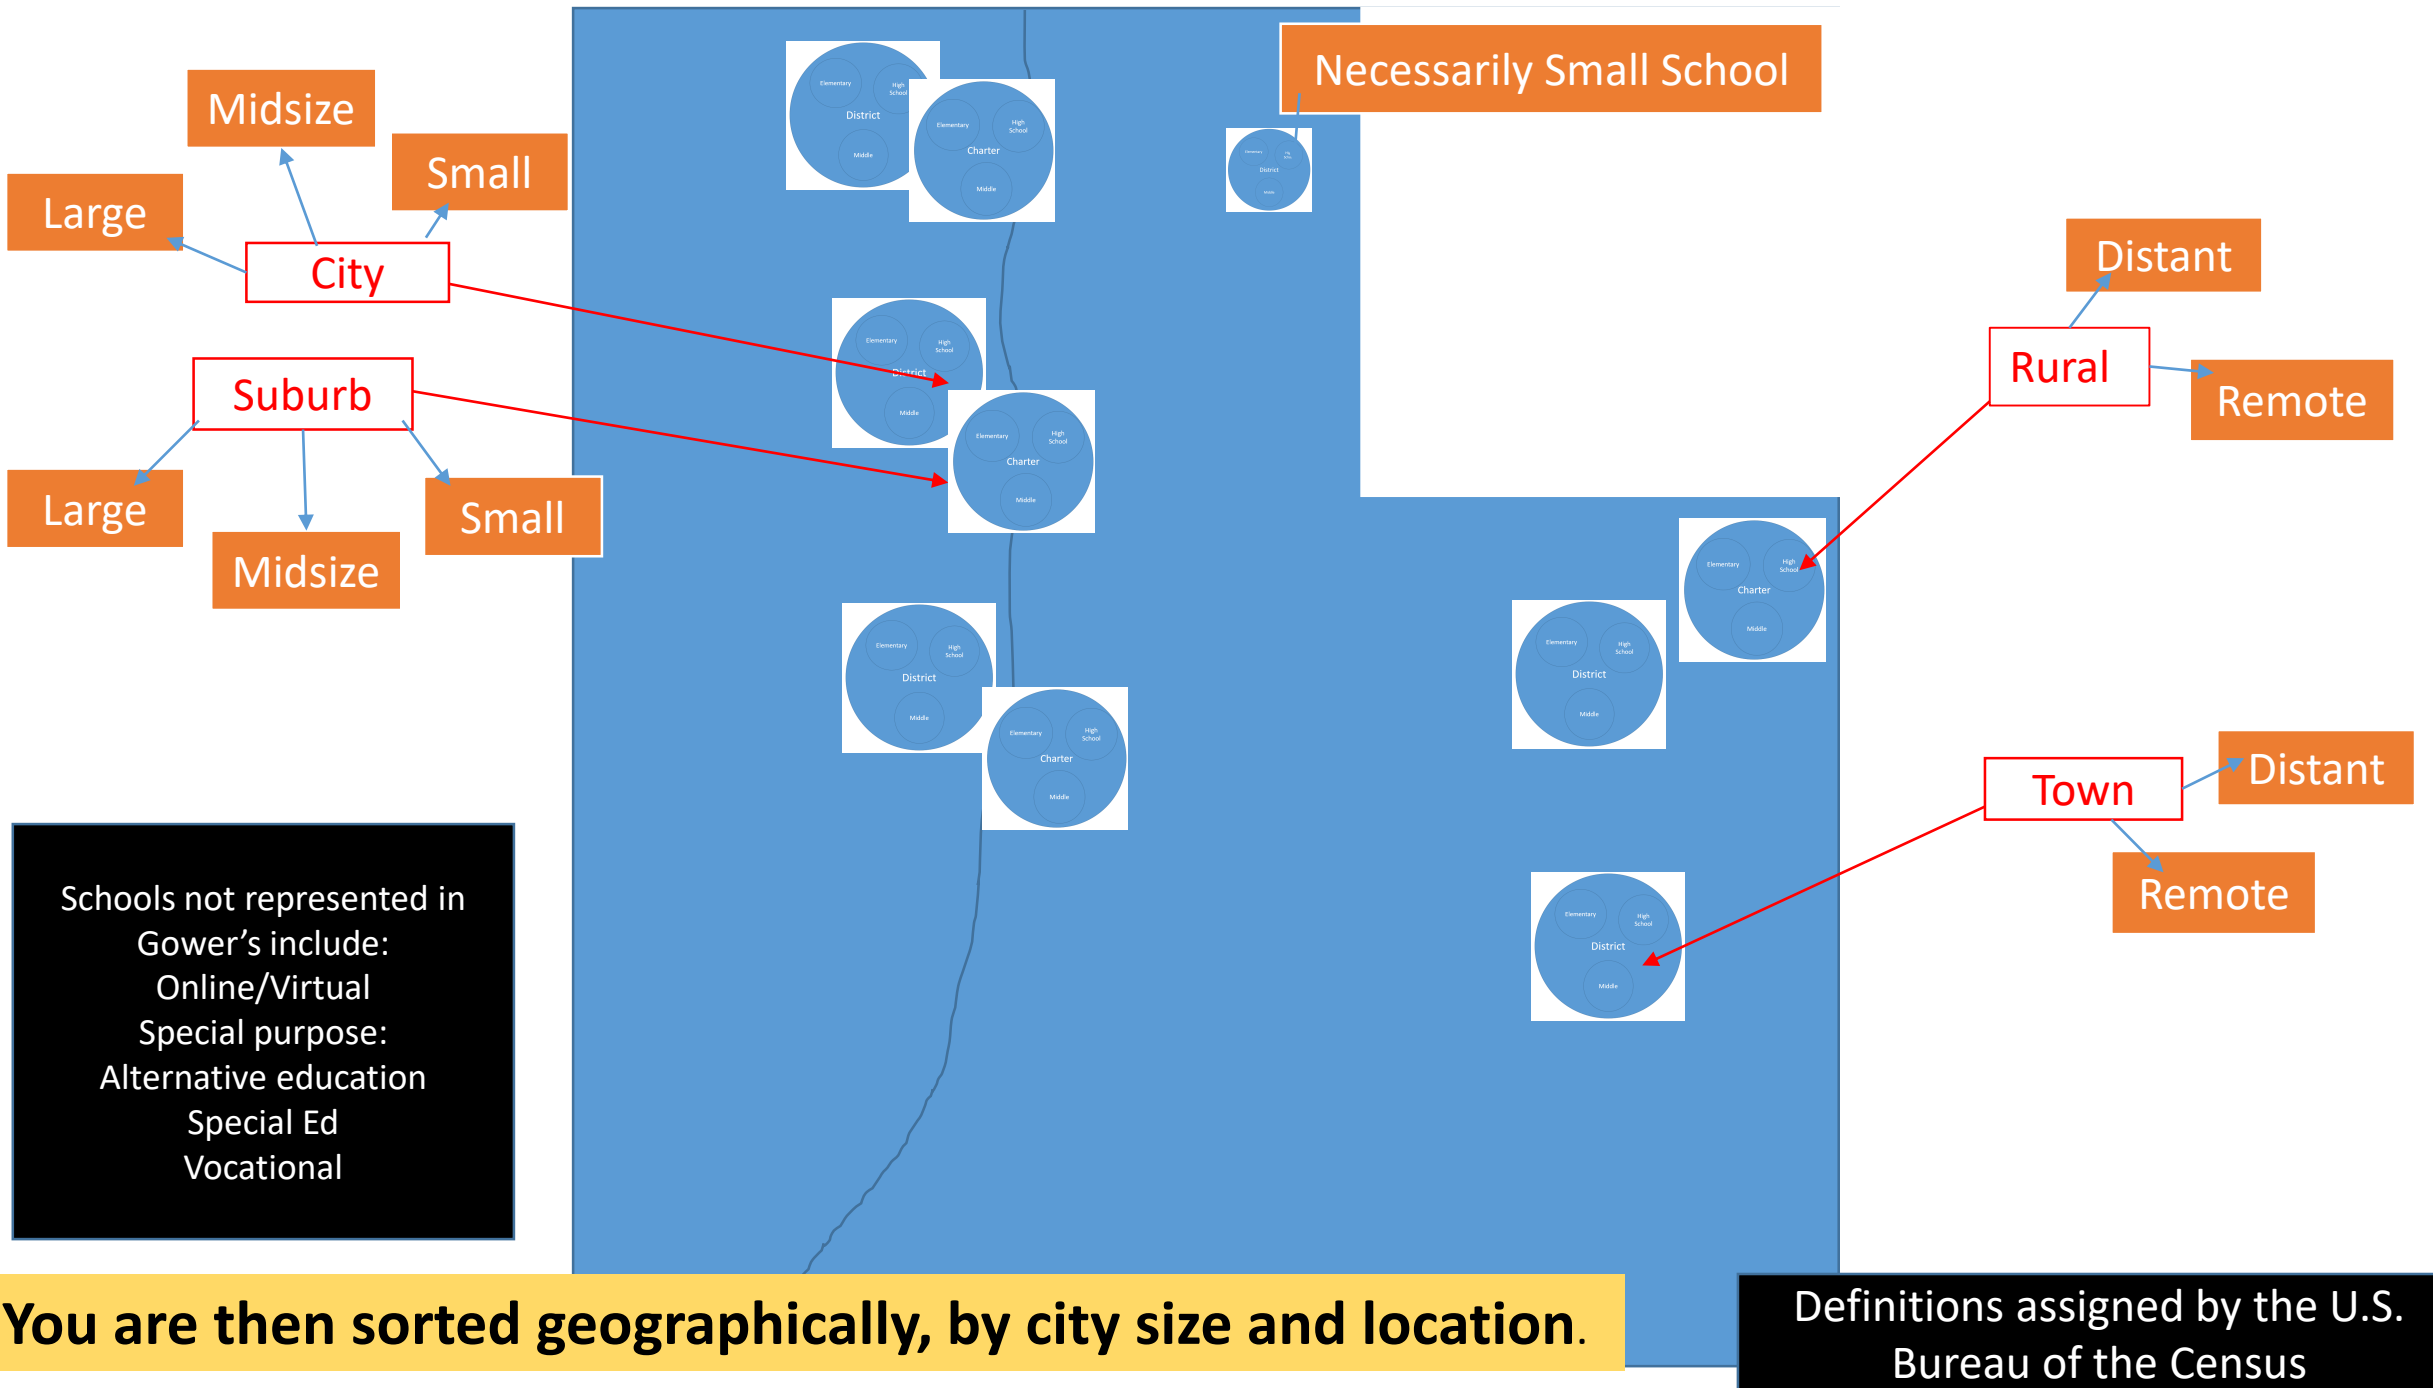

<http://www.schools.utah.gov/data/Resources/GowerCoefficientSimilarity.aspx>

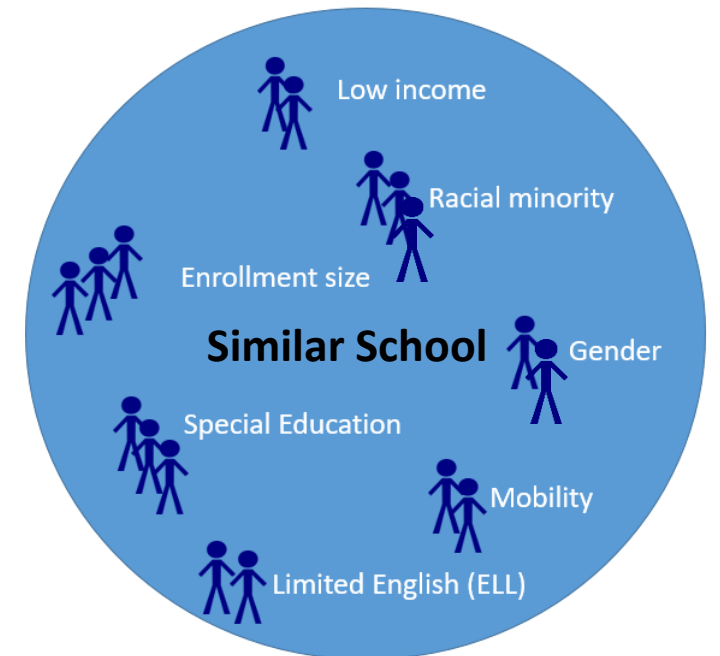

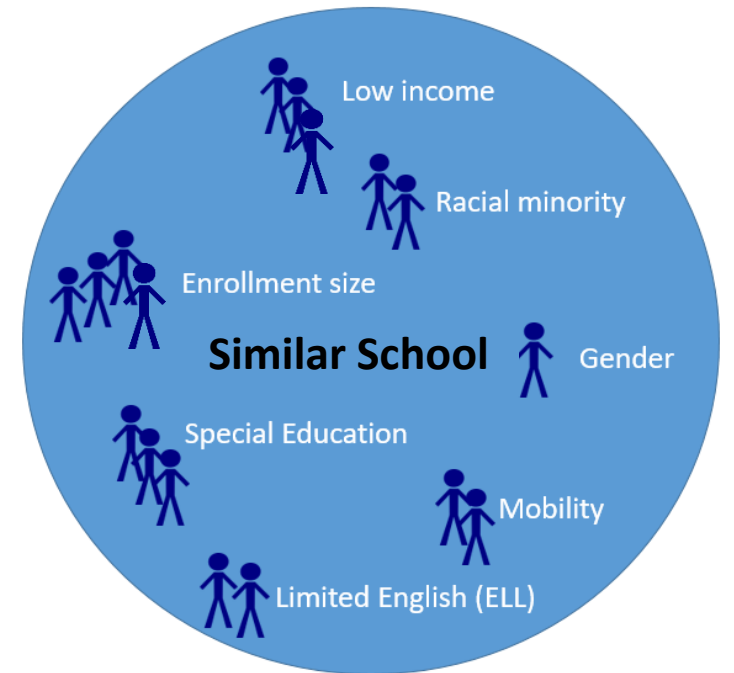

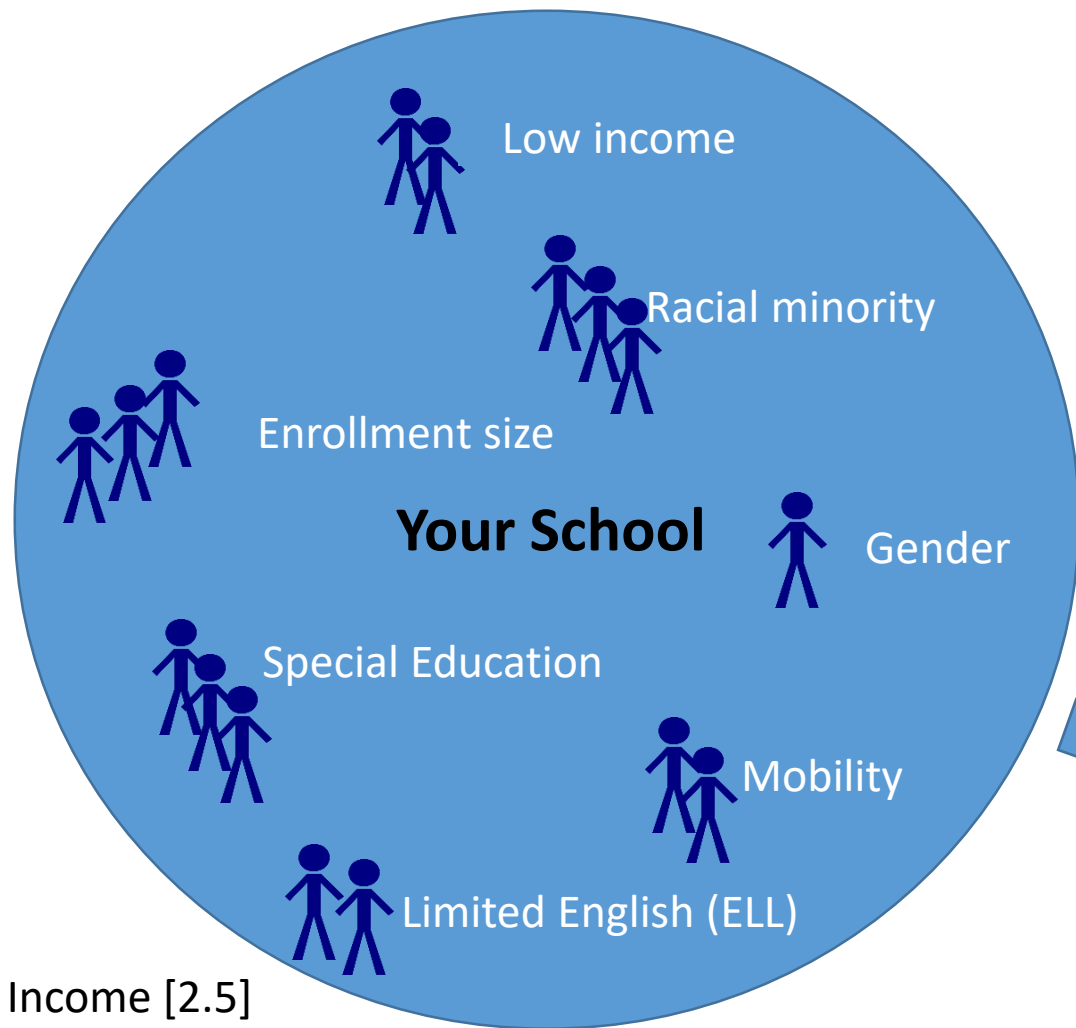

**Gower's starts by identifying schools into three categories; Elementary, Middle Schools, High Schools**

**Then you are identified as a district school or a charter school.**

Low Income [2.5]

Racial Minority [2.0]

Enrollment [1.5]

Limited English Proficiency [1.25]

Special Education [1.0]

Mobility [0.75]

Gender [0.5]

**Finally, you are sorted by school demographics.**

UTAH CODE School Grading Act [53a-1-1110](#) states, “(2) notwithstanding subsection (1), and subject to subsection (3), for a school year in which at least 65% of schools described in subsection (1)(a) or (b) receive an a or a b, the board shall increase an endpoint of a range described in subsection (1)(a) or (b) by five percentage points over the previous school year.”

For the school year 2015-2016, more than 65% of Utah’s schools were assigned a letter grade of an A or B. Therefore, new grade range percentages are now applied. As a result of the change, several schools may see a decrease in their letter grade. Please see the following table.

# Changing the Location will change which schools we are comparing.

Targeting Students: Easy to identify students who scored below proficient for more than one year and who didn't show growth.

Targeting Instruction: Easy to identify what content to cover for the current year or review previous year's scores to identify where instruction fell short.
